

AI Interview Summary

Total Score: 6/100

Strengths:

- Good Technical Knowledge

Areas to Improve:

- Add More Examples
- Give Detailed Explanations

AI Evaluation:

Question:■

What are Python decorators?■

Answer:■

sdjlkvdfjlsnv ■

Technical Accuracy: 0/10■

Communication: 0/10■

Confidence: 0/10■

The answer provided is not a valid response to the question. It appears to be a string of random characters, which does not address the question about Python decorators. A clear and accurate response is expected, but this answer does not meet the minimum requirements for understanding the topic.■

-----■

Question:■

Explain JVM, JRE and JDK.■

Answer:■

ASNxDJBVV F■

Technical Accuracy: 0/10■

Communication: 0/10■

Confidence: 0/10■

The answer provided is complete gibberish and does not relate to the question at all. The question specifically asks for an explanation of JVM, JRE, and JDK, which are fundamental concepts in Java, but the answer appears to be a random collection of letters. This lack of understanding and miscommunication of the topic makes the response completely unsuitable and fails to demonstrate any technical knowledge or confidence in the subject matter.■

-----■

Question:■

What is event bubbling?■

Answer:■
DRHXN NVJ JL/BNVGHJNNLK■

Technical Accuracy: 0/10■
Communication: 0/10■
Confidence: 0/10■

Overall Feedback: The provided answer is completely unrelated to the question, appearing to be nonsensical text. This suggests a lack of understanding of the topic and an inability to properly communicate complex concepts. As a result, the candidate's technical, communication, and confidence skills seem to be severely lacking in this context.■

-----■

Question:■
Difference between pointer and reference?■

Answer:■
HJVHJK,LLBVBJ/.LNK■

Technical Accuracy: 0/10■
Communication: 0/10■
Confidence: 0/10■

This answer is completely irrelevant and nonsensical. It appears to be random text rather than a thoughtful response to the question. The speaker seems to be unclear about what they're saying, and their answer does not provide any useful information.■

-----■

Question:■
What are React Hooks?■

Answer:■
It is a frontend part■

Technical Accuracy: 2/10■
Communication: 3/10■
Confidence: 4/10■

Overall Feedback: The answer lacks technical accuracy as React Hooks are not limited to the frontend, but rather are a way for function components to have state and side effects. The statement also fails to provide any meaningful details about what React Hooks are. The communication and confidence levels are somewhat low due to the brevity and vagueness of the response.■

-----■

Question:■
Difference between SQL and MongoDB?■

Answer:■
It is a JSON format■

Technical Accuracy: 2/10■
Communication: 4/10■
Confidence: 5/10■

Overall Feedback: The answer lacks technical accuracy as MongoDB is not a JSON format alone; it's a NoSQL document-based database that stores data in JSON-like format called BSON. Additionally, it does not address the fundamental difference between SQL and MongoDB. However, the person provides a somewhat clear response, which suggests moderate confidence.

-----■

Question:■
Explain normalization.■

Answer:■
jksand nvdmkvm dl,■

Technical Accuracy: 0/10■
Communication: 0/10■
Confidence: 0/10■

The answer provided is not a valid response to the question about normalization. Normalization appears to be a common database design technique to eliminate data redundancy, but the answer does not provide any meaningful or coherent explanation of normalization.

-----■

Question:■
Difference between merge and rebase?■

Answer:■
MDNVJKDNVKJDNVKJSJDWIHKEKLKFDNJBDNKSJNF.LKMVLDSL VKFMFLKSDNJ VXCLNLV■

Technical Accuracy: 0/10■
Communication: 0/10■
Confidence: 0/10■

Overall Feedback: The interviewee provided no coherent or relevant answer to the question, instead giving a string of nonsensical characters. This suggests a lack of understanding of the basics of merge and rebase, as well as poor communication and interviewing skills.

-----■

Question:■
What is ACID property?■

Answer:■
SANDSJBVDSUIHDEW LCXM,.X NCNVCJLSK;■

Technical Accuracy: 0/10■
Communication: 0/10■
Confidence: 0/10■

Overall Feedback: This response is completely unrelated to the question being asked, as it appears to be a random sequence of characters. The interviewer is looking for an explanation of the ACID property, which is a set of properties that guarantees database transactions are processed reliably. A correct answer would provide a clear and concise definition of ACID (Atomicity, Consistency, Isolation, Durability).

-----■

Question:

Explain inheritance and polymorphism.

Answer:

Many forms and child inherit property of parent class

Technical Accuracy: 2/10

Communication: 3/10

Confidence: 2/10

Overall Feedback: The answer contains a good start with mentioning "many forms", which hints at polymorphism, but falls short by not explaining what those "many forms" or "polymorphism" actually means. The mention of "child inherit property of parent class" is a vague reference to inheritance, but again, does not provide a clear definition or explanation. As it stands, the answer lacks specificity and clarity, and may confuse the interviewer about the concepts of inheritance and polymorphism being discussed.
